

# Recommendation Letter

Jerald Yik was working under my direct supervision as an Engineering Intern in the QA department from 4th of May 2021 till 20th of August 2021. I've been consistently impressed with his diligence, efficiency, and ability to get things done.

Jerald got a chance to contribute into following areas in our company:

- REST API E2E test automation
- Web UI E2E test automation
- Load and stress automated testing
- Setting up and maintaining CI / CD pipelines

Also he was proactively involved in product delivery in a cross functional agile team and maintaining existing test infrastructure.

Jerald has proven to be a smart, easy-to-learn employee, able to find non-standard solutions in difficult situations. He is also able to find himself both in independent work, as well as in work with a team. He is more interested in projects with new and trending technologies, however he also shows himself well in team support roles.

I recommend referring this employee to new projects to help with test automation setup or projects that needed quality improvements. I also want to mention the abilities of establishing communication and improving quality measurements.

Best regards,

Oleg Toporkov  
Senior QA Automation Engineer  
Affinity ID Network GmbH
